The Boone and Crockett Club's Lee and Penny Anderson Conservation Education Program

Conservation Through Life-Long Learning

The education program is operated from the Elmer Rasmuson Wildlife Conservation Center on the 6,000-acre Theodore Roosevelt Memorial Ranch along the Rocky Mountain Front. The ranch is operated as a working cattle ranch and serves to provide a land base for research, education, and demonstration.

Teaching and learning about the ecological components of the landscape in such a way that people are kept in the picture.

The future of our world depends on the choices people make. Education is a key factor in what those choices are. The Lee and Penny Anderson Conservation Education Program focuses on the integration of wildlife conservation, private land and livestock management, and strives to offer perspectives that foster shared use of natural resources and promotes stewardship of the land to build common ground for sustaining healthy ecosystems.

K-12 School Program

Participants in the Lee and Penny Anderson Conservation Education Program experience first hand the magic of the Theodore Roosevelt Memorial Ranch (TRMR) and the greater Rocky Mountain Front ecosystem. The

magic results from a dynamic combination of many influences – the individuals, activities, and physical location of the TRMR.

The goal is to help students and educators build lasting awareness, understanding, and appreciation for the living and non-living components of our natural world.

Outdoor Adventure Camps

These summer camps offer opportunities for diverse age groups to learn more about outdoor skills and recreation, conservation

and wildlife related careers. The camp goals are to develop youth's awareness and understanding of Montana's Rocky Mountain Front and the importance of conservation and natural resources. To provide outdoor opportunities for youth to gain a variety of outdoor skills on private and public lands. To encourage youth to be conservation wise citizens. And to develop engaging experiences for youth interested in natural resource related-careers.

Conservation Across Boundaries®

Conservation Across Boundaries® is a program designed to teach educators how natural resource conservation issues are tightly

linked to the biology, ecology, and cultural history of North American landscapes. The goal is to engage and train educators to observe, analyze, and consider from a systems perspective underlying components of landscape conservation. Participants learn about the unique habitats, fish and wildlife, and ecology of different regions from a systems perspective. They have opportunities to interact with a variety of fish, wildlife, conservation, and natural resource professionals and land managers.

Annually approximately 2,000 youth and 500 adult educators build lasting awareness, understanding, and appreciation of the natural world and conservation through their participation.
